ADDITIONAL ELECTRICAL SERVICES

Building Voltage: 120-208-600 volts

Ratings placed on the equipment will indicate voltage, amps/watts/hp/kw and phasing.

Maltby Electric can provide the correct connector for your equipment. It may be necessary for **Maltby Electric** to place a Transformer within your booth space depending on the service required.Contact **Maltby Electric** 3 weeks prior to move in for quotations.IMPORTANT**1. Maltby Electric** reserves the right to adjust orders not calculated accurately.

2. Orders placed on-site (i.e during move in) will be charged 10% additional to the Regular Price.

3. Orders will only be accepted if paid in full.

4. Cheques must be received by March 15/20 and made out to **Maltby Electric**. To pay by bank transfer please notify **Maltby Electric** for the info.Please sign below to confirm order (Send complete form to greg.maltby@sympatico.ca)

DID YOU KNOW

Borrowing power from an adjoining booth is **NOT** permitted. Sharing your neighbour's power may overload the circuit. Order 24-hour outlets if you require your power to remain energized overnight - i.e for refrigerators, freezers, aquariums etc.

All equipment/devices must be approved for use by a recognized certification agency – i.e CSA, ULC. Approval markings can be found on the rating nameplate.

All equipment/devices must have a 3 wire grounded cord, minimum of #14 gauge wire.

A ground Fault Circuit Interrupter (GFI) must protect all 120 volt electrical equipment/devices within 6 feet of a water/liquid source.

Where is electricity supplied in my booth?

Power is supplied at the back of your booth. The power location is determined by **Maltby Electric**.

Which electrical outlet do I need?

To determine your electrical needs, simply add together the wattage of each device that will require power in your booth. You will find a nameplate located on the back or bottom of each device, showing the wattage info.

For example, if a laptop requires 400 watts, a monitor requires 150 watts and a cell phone charger requires 50 watts, you will need a total of 600 watts. Option 1 is the correct choice.

- 1. 800 Watt, 12 amp, 120 volt outlet with 2 plugs – Examples include a laptop, computer monitor, cell phone charger, television or printer**
- 2. 1500 Watt, 12 amp, 120 volt outlet with 2 plugs, 24 hours. For equipment/devices requiring continuous power, such as a small household fridge or freezer**
- 3. 1800 Watt, 15 amp, 120 volt outlet - Examples include a hair dryer, curling iron or toaster oven.**
- 4. 2400 Watt, 20 amp, 120 volt outlet – examples include a popcorn maker, hot plate or industrial coffee maker.**

ADDITIONAL SERVICES

In addition to 120 volt and 208 volt electrical service connections, we offer various voltages: 230/240 single and three phase and 380/460/480/600 three phase.

Please check the nameplate on your equipment to confirm voltage, amps/watts/hp/kw and phase.

15 Ft extension cords are available for rent if an outlet has also been ordered.
